May 14, 2012

This release is recommended for all current APL+Win subscribers
that have prior versions of APL+Win installed. Current APL+Win
subscribers can download the update from
http://www.apl2000.com/software.php.

The APL+Win 12.0 release includes the following important new enhancement:

- Interpreter: The ☐DR system function options 'wrapl' and
'unwrapl' now support ☐MOM (<<<Object Reference>>>) and
☐UCS (<<<UCS Characters>>>) data types.

The APL+Win v12.0 release includes the following important bug fixes:

- Interpreter: During)SAVE and ☐SAVE commands, the
workspace timestamp (☐WSTS) was updated in the workspace
when the workspace file file attribute was set to
read-only.

- Interpreter: Some floating points numbers appeared as
stars in the session with print precision set to 16 and
greater.

Example:
      ☐pp
10
      ☐ct
1.0E¯13
      N←9.999999999999998
      N (1 2 3)
 10 1 2 3
      ☐pp←16
      N (1 2 3)
 **************** 1 2 3

In v12.0, the result above is

 9.999999999999990 1 2 3

- Session: Long statement lines containing numerous color
changes had syntax coloring errors mid-way through the lines.

- APL GUI: The edit portion in a Combo Box control didn't
turn gray (the default appearance) when disabled (enabled=0).
