Sep 26, 2012

The APL+Win v12.2 release is available and recommended for all current APL+Win subscribers that have APL+Win v12.x installed. To download this release, visit <http://www.apl2000.com/software.php> and click the file "APL+Win v12.2" using your software download username and password.

The APL+Win 12.2 includes:

Bug Fixes:

Interpreter: The [Config]ToolTipStyle startup parameter did not take affect when set in the APLW.INI file.

Interpreter: The runtime system (aplwr.exe) did not support workspace sizes larger than 2 GB as in the development system (aplw.exe).

APL Grid: The ampersand character in the XTextSize method was treated as an escape character that underlined the next character in the string.

Session: The value tips were truncated in the session for functions and variables.
