April 15, 2013

The APL+Win v13.0 release is available and recommended for all current APL+Win subscribers. To download this release, visit <http://www.apl2000.com/software.php> and click the file "APL+Win v12.3 Update" using your software download username and password.

The APL+Win 13.0 includes the following changes:

1. Bug Fix [APLGUI] - The appearance of the right and bottom edges of a Form appeared differently depending on the order in which the caption and non-zero border property were set.
2. Bug Fix [APL GRID] - The `xHeadRows = 0` and `xHeadCols = 0` states were not saved in the APL Grid's `def`, `content` and `xXML` properties.
3. Updated APLNext Virtual APL Keyboard - The latest version of the Virtual APL Keyboard provides two new checkbox options: "Virtual Key regions are active" and "Tool Tips are active". These options are described in the document "APLNext Virtual Keyboard.pdf".
