The APL+Win v13.3 release is available and recommended for all current APL+Win subscribers. To download this release, visit <http://www.apl2000.com/software.php> and click the file "APL+Win v13.3 Update" using your software download username and password. For a new installation, click the file "APL+Win v13.3 installer".

The APL+Win 13.3 includes the following enhancements/bug fixes:

1. Bug Fix [APLGUI]: In APL+Win 13.2, the text in the Button class did not display (paint) correctly in the APL+Win Keyboard window started with the]KB User Command. In another instance, the Button class did not return after disabling (enabled=0) then re-enabling (enabled=1) the Button class.
2. Bug Fix [APLGUI]: In APL+Win 13.2, when setting the style property value to 7 (transparent) for the Frame class then changing it to any other style value had no affect.
3. Bug Fix [APLGUI]: In APL+Win 13.2 and earlier, the]TEXTFILE user command failed with an XFHOST ERROR error message when the argument was a file name.
4. Updates to APL+Win C# Script Engine (CSE): Refer to the document "CSE Updates in APL+Win v13.3{.pdf}" for the complete description of changes in this release.

Note: Workspaces saved in v13.1 and newer will not load in prior versions of APL+Win.
